DETAILED ACTION

1. The disclosure is objected to because of the following informalities and appropriate correction is required:
 - (i) In Fig. 1, the figure should be reformatted by removing extraneous portion such as “ethylene” with the arrow and the drawing representing the catalyst coated carbon nanotubes, and an arrow should be placed under “cocatalyst”.
 - (ii) In paragraph [0011], the list of various applications referred as [3-6] are not provided.
 - (iii) In paragraph [131] of page 22, the last sentence of the paragraph is improper.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-23, 33 and 43 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In line 8 of claim 1, the limitation “activating same catalyst system for polymerization” is new matter. It is accepted in the art that the catalyst is activated upon contacting with cocatalyst, i.e., the catalyst is in activated form as soon as carbon nanotubes are combined with the cocatalyst/catalyst couple. Further, there is not support for the additional activation step in the specification as originally filed.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The two sets of ranges of "10-3" and "10-2" are used to limit the amount of cocatalyst which renders the claim indefinite.

The catalyst limitations of "hindered amidoaryl chelates, hindered oxoaryl chelates, Fe (II and III) and Co (II) bis(imino)pyridines and Brookhart complexes based on Ni (II), Pd" lacks definitions. Clarification is requested.

Allowable Subject Matter

6. The subject matter appeals to be allowable.

While there are references, such as Wang et al. (US 6,713,519) and Tennent et al. (6,099,965), disclose carbon nanotubes as support for catalyst, those reference do not teach or reasonably suggest the preparation of catalyst composition for olefin polymerization. Since it is not predictable how the olefin polymerization catalyst would behave when carbon nanotubes is used as a support, the subject matter of the instant claims are deemed to be novel.
